Here is a good tutorial of LabVIEW :
http://www.mech.uwa.edu.au/jpt/tutorial/ieindex.html (Tutorial 1). I suggest that you go through the first one even if you understood everything in the class. For those who did not attend the class, I also recommend :
http://www.ee.buffalo.edu/faculty/paololiu/edtech/roaldi/tutorials/labview.htm.
A lot of documentation is provided in LabVIEW software. In fact just looking at context help will be enough for most cases. Tutorials and examples are also provided in the package (Open --> Examples.vi).

Download LabVIEW 7.1 from DC++ and enjoy!
