

OpenCV:

Good thing about opencv is its portability. The same code would work in Linux and Windows both. For installing opencv and working it in linux attaching the tutorial with this mail. Those who will work in windows using Microsoft Visual C++ or Visual Studio 6.0 should also try code written in that tutorial and see how JPEG lead to loss in data. We will take tutorial/lab also....on this so don't worry if you could not able to compile/run the program and can contact us till tomorrow for any problem you face.

The tutorial is in download section and demo programs (CVPR_01_course.zip named as in site OpenCV Course) for opencv for windows you can download from http://sourceforge.net/project/showfiles.php?group_id=22870 .
