

ESc101N: Fundamentals of computing(Lab Session 2)

August 11, 2009

Instructions

1. Please read the question carefully and write the program accordingly
2. Make sure that the TA has graded you program
3. The marks are distributed as follows. You get 60% of the marks if the basic algorithm is current, 20% if you manage to compile and execute and 20% for writing the code cleanly, i.e. using proper variable names, intending and making the code more readable.

Question 1. (10 marks) Write a program that takes as input two integers n and m and prints the multiplication table of n upto m in reverse order. i.e. the multiplication table starts with $n \times m = n \cdot m$ till $n \times 1 = n$. Here is a sample interaction of the program

```
$ mult
enter the number whose multiplication table is required: 2
enter the length of the multiplication table: 5
The multiplication table for 2 starting from 5 upto 1 is
2 x 5 = 10
2 x 4 = 8
2 x 3 = 6
2 x 2 = 4
2 x 1 = 2
$
```
